Author Guidelines

Description

Created in 2017, the scientific journal SAGREN « Systèmes Agraires et Environnement », EISSN: 2661-7730, edited by the Laboratory Management and Valorization of Agricultural & Aquatic Ecosystems (LMVAAE), Morsli Abdellah Tipaza University, Algeria, Institute of Sciences, is a biannual journal and publishes original articles, research papers, review articles, as well as conference proceedings in all fields of the agronomy, biological sciences and environment.

The Journal welcomes the submission of manuscripts that meet the general criteria of significance and scientific excellence. We encourage the submission of articles that will have the strongest interest and added value to the journal's international readership.

Submit your manuscript

The SAGREN Journal accepts only manuscripts submitted using the electronic submission system https://www.asjp.cerist.dz/en/PresentationRevue/453. After submission, your manuscript will have a number assigned and pre-reviewed. Electronic submission of manuscripts is provided that the text, tables, and figures are included in a single Microsoft Word file. Here is a template by which you should write articles SAGREN Manuscript Template (We request authors to follow this guideline and format their manuscripts exactly the same as this document). The easiest way to do this is download this template and replace its contents with those in your manuscript).

Requirements for reviewers:

1. only one reviewer can be from the same university as authors,

2. reviewers must be a professional from research study field,

3. reviewers must publish in the world scientific journal which is included in world scientific databases,

4. reviewers can not be a co-authors in submitted research study

All manuscripts are initially screened on their topic suitability. SAGREN 's core subject-matter fields/topics include (but are not limited to):

- Agroecosystems (exploration, management, functioning, health, and conservation)
- Aquatic Ecosystems (exploration, management, functioning, health, and conservation)

- Ecological consequences of land use intensification and other human impacts
- Environmental implications of agricultural land and water use and change (biodiversity conservation and land management, and ecological restoration and stewardship)
- Botany, Ethnobotany and Breeding & Genetics
- Nutrition, food quality and food safety.
- Medicinal plants, bioactive natural products and alternative medicine.
- Antimicrobial resistance (AMR) prevention, treatment and control measures.

Article Types

Three types of manuscripts may be submitted:

1- Original papers (Regular Papers) should report the results of original research. The material should not have been published previously elsewhere (except in a preliminary form of an abstract, a published lecture or conference paper).

2. Reviews should cover a part of the subject of active current interest. It should be concise, non-limited in length, but it must contain minimal 8000 words except references. Reviews are also peer-reviewed.

3. A Short Communication is a concise, but complete, description of a limited investigation, which will not be included in a later paper. Short Communications should be as completely documented, both by reference to the literature and description of the experimental procedures employed, as a regular paper. They should not occupy more than 6 printed pages, including figures, etc.

Note: The journal publishes supplements, podcasts and webinars. For sponsorship opportunities please contact the editor-in-chief : Dr DEBIB Aicha

Email: a_debib@yahoo.fr

Review Process

All manuscripts are reviewed by qualified reviewers, also members of the editorial office. Decisions will be made as rapidly as possible, and the journal strives to return reviewers comments to authors within 8 weeks. The editorial board with reviewers cooperation will re-review manuscripts that are accepted pending revision. It is the goal of the SAGREN journal to publish manuscripts within 2 or 4 months after submission.

Language

Please write your text in good French or English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use an English Language Editing Service.

Submission checklist

You can use this list to carry out a final check of your submission before you send it to the journal for review.

Ensure that the following items are present:

- One author has been designated as the corresponding author with contact details:
  • E-mail address
  • Full postal address

- All necessary files have been uploaded:
  Manuscript:
  • Include keywords
  • All figures (include relevant captions)
  • All tables (including titles, description, footnotes)
  • Ensure all figure and table citations in the text match the files provided
  • Manuscript has been 'spell checked' and 'grammar checked'
  • All references mentioned in the Reference List are cited in the text, and vice versa
  • Permission has been obtained for use of copyrighted material from other sources (including the Internet)
  • A competing interests statement is provided, even if the authors have no competing interests to declare
  • Journal policies detailed in the template have been reviewed
  • Referee suggestions and contact details provided, based on journal requirements

Cover Letter

A cover letter must be uploaded with the manuscript in a separate WORD file that should include the name, mailing address, contact information (affiliation, phone number and e-mail address) and research interest of four (4) experts in the field as potential reviewers for the manuscript. The cover letter should also include the name and e-mail address of the corresponding author.

Article structure

All portions of the manuscript must be typed one-half. The pages may not be numbered, those assigned Editorial office. Authors should divide teir article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc.

Title Page

The Title should be a brief phrase describing the contents of the paper. The Title Page should include the authors' full names and affiliations, the name of the corresponding first author along with e-mail and phone number.

Abstract

An abstract is a shortened version of the paper and should contain all information necessary for the reader to determine: (1) what the objectives of the study were; (2) how the study was done; (3) what results were obtained; (4) the significance of the results. The typical length of an abstract is 150 – 250 words. No literature should be cited, non-standard abbreviations should be used only when the full term is very long and used often. Each abbreviation should be spelt out and introduced in parentheses the first time it is used in the text. Only recommended SI units should be used.

Keywords

Authors are asked to supply 3 to 6 keywords (in alphabetical order) to be used as an aid to coding and indexing.

Introduction

The Introduction should provide a clear statement of the problem, the relevant literature on the subject, and the proposed approach or solution. It should be understandable to colleagues from a broad range of scientific disciplines.

Materials and Methods

Materials and Methods should be complete enough to allow experiments to be reproduced. However, only truly new procedures should be described in detail; previously published procedures should be cited, and important modifications of published procedures should be mentioned briefly. Capitalize trade names and include the manufacturer's name and address. Subheadings should be used. Methods in general use need not be described in detail.

Results

Results should be presented with clarity and precision. The results should be written in the past tense when describing findings in the author(s)'s experiments. Previously published findings should be written in the present tense. Results should be explained, but largely without referring to the literature.

Discussion

The discussion should explore the significance of the results of the work, not repeat them. Avoid extensive citations and discussion of published literature. A combined Results and Discussion section is often appropriate

Conclusion

The conclusion should include the most important idea of the experiment, the author's own findings, possible solutions to the problem, recommendations for further research, etc.

Acknowledgments

The Acknowledgments of people, grants, funds, etc should be brief. Collate them in a separate section at the end of the article before the references.

Tables

Please submit tables as editable text and not as images. Tables should be placed either next to the relevant text in the article. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article.

Figures

Figures should be numbered and are included directly in text. Graphics should be prepared using applications capable of generating high resolution GIF, TIFF, JPEG or PowerPoint before pasting in the Microsoft Word manuscript file. Use Arabic numerals to designate figures and upper case letters for their parts (eg; Fig 1).

Math formulae

Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y.

References

In the text, a reference identified by means of an author‘s name should be followed by the date of the reference in parentheses. When there are more than two authors, only the first author‘s name should be mentioned, followed by ’et al‘. In the event that an author cited has had two or more works

published during the same year, the reference, both in the text and in the reference list, should be identified by a lower case letter like ’a‘ and ’b‘ after the date to distinguish the works.

We respected APA style for references. Google scholar generates APA style automatically. References should be listed at the end of the paper in alphabetical order.

Examples of APA style **(APA 7th edition)**
