

Ethics Charter

PARADIGMES Journal

The **Paradigmes** journal publishes original scientific articles that are assessed for quality through its adherence to the principles of the code of ethics for publishing and the prevention of false practices.

The Code of Ethics is listed in *the Committee on Publication Ethics* (COPE) and serves as a guide for authors, researchers and other stakeholders in the publication of articles in the journal by reviewers, consultants and publishers, so that the journal targets the unification of standards of action. The Code of Ethics is an agreement, and is therefore fully committed to its implementation with the acceptance of responsibility and the fulfillment of the duties and responsibilities of each party.

1. Publisher's Responsibility

1.1. Publication Decisions

Copyrights and citations of previous scientific works must be respected in order to preserve the rights of others when publishing articles in the journal. The publisher is responsible for the decision of publication and is based on the policy of the journal and compliance with legal requirements for publication, in particular with regard to defamation, or violation of the copyrights of others or hacking. The editor may also consult the editorial board or reviewers to make a decision.

1.2. Integrity

The editor ensures that the content of each article is evaluated regardless of the author's gender, origin, religious beliefs, citizenship or political affiliation.

1.3. Privacy

Information about authors should be kept highly confidential and kept by all people who have access to it such as the editor, members of the editorial board, any member involved in the writing, publication and other parties involved in the review process evaluation.

1.4. Express Consent

The research results of others on articles not accepted for publication, may not be exploited or used without the written permission or authorization of the author.

2. Reviewer's Responsibility

2.1. Contribution to the Publication Decision

The reviewer (resident) helps the editor and the editorial board to make the decision to publish as well as to help the author to improve the article and to correct it.

2.2. Speed of Service and Deadlines

The reviewer must initiate and accelerate the evaluation of the article sent to him on time. If this is not possible after prior study of the article, he must inform the editor that the subject does not fall within his field. The reviewer should also inform the editor that the review may be delayed due to lack of time or lack of sufficient resources for the review.

2.3. Privacy

All information about the article must be confidential. The reviewer must seek to maintain their confidentiality and may not disclose or discuss their content with any party other than those authorized by the publisher.

2.4. Objectivity

The reviewer must prove his review and evaluation of the research, which is directed to him, by arguments and objective evidence and avoid arbitration on the basis of his personal, racial, sectarian and other opinion.

2.5. Source Selection

The reviewer should attempt to identify sources and references relating to topics that the author has not cited. Any text or paragraph taken from other previously published works should be properly cited. The reviewer must inform the editor and warn him of any similar or overlapping work, with the work being reviewed.

2.6. Conflict of Interest

The reviewer shall not review articles for personal gain, i.e. shall not accept arbitration of articles by which there may be interests of persons or institutions or personal relationships.

3. Author's Responsibility

3.1. Preparation Criteria

The author must submit original research and present it accurately and objectively in a manner that is scholarly, and consistent with the characteristics of the articles – whether in terms of language, form, or content, in accordance with the publishing standards and policies of the review. The author should show the data correctly, through full reference and considering the rights of others in the article. The author must avoid showing sensitive, immoral, taste, personal, ethnic, doctrinal, counterfeit and inaccurate information or translating the work of others without mentioning the source of the quotation in the article.

3.2. Originality and Piracy

The author must prove the originality of his work; any quotation or use of paragraphs or words of others must be cited appropriately and correctly – the journal reserves the right to use piracy detection programs for works submitted for publication.

3.3. Repost

The author cannot submit the same work (article) to more than one journal or conference – doing so is considered immoral and unacceptable behavior.

3.4. Data Access and Retention

The author must retain the private data used in his article and submit it, as requested, to the editor or reviewer.

3.5. Authors of the Article

The authors of the article should be limited (the number) to authors who have appeared in the article, to contributions in a significant and clear way both in terms of design, implementation and interpretation, with the need to identify the responsible author of the article – who has an important role in the preparation of the article. Since the rest of the authors are also cited in the article, the author of the article must ensure that the names and information of all authors are present and that no other names are included without is actually the author of the article. All authors must be knowledgeable about the article, agree explicitly on what is contained according to the publication rules.

3.6. Bibliography and References

The author of the article is obliged to indicate the references in an appropriate manner; the text should include all books, publications, websites and other research by people in the list of sources and references cited or mentioned in the text of the article.

3.7. Report Errors

If the author becomes aware of the existence of a fundamental error or of inaccuracies of the details quoted in his article, he must immediately, and at any time, notify the editor of the journal or the publisher, and cooperate with him to correct the error.

4. Copyright

All content on this site is copyrighted and may not be reproduced, as the publisher owns the copyright to all material published on the Paradigmes Journal website. The following guidelines apply to all users of the journal website:

- Users cannot share their username or password without permission from the publisher.
- Users can view, download, print or save journal content for research and teaching purposes.
- Any use and/or copies of this publication in whole or in part, must include the usual bibliographic citation, including author reference, date, article title, journal title and address of the site.

4.1. Disclaimer

Changes to journal publications can be made at any time, as needed.

4.2. Confidentiality Declaration

The names and email addresses entered into the journal website are used exclusively for the purpose of this publication and are not made available for any other purpose or to any other party.

4.3. Fees and Charges

The journal Paradigmes is non-commercial and does not impose evaluation, publication acceptance and printing fees.

When an article is accepted, the copyright is automatically transferred to the journal Paradigmes.

The copyright of all articles published in the journal Paradigmes is retained by the authors concerned in accordance with the Creative Commons Attribution license; no commercial use; no modification 4.0 International (CC BY-NC-ND 4.0).

4.4. Open Access Policy

All articles published by the journal Paradigmes are freely and permanently consulted online as soon as they are published, without hindrance, including the full text of existing research articles, in accordance with the principle according to which "free access to research promotes a greater great global exchange of knowledge".
