An international, peer-reviewed scientific journal
specializing in language and literature.
Published by the Laboratory of Interpretation and
Discourse Analysis, Faculty of Arts and Languages,
Abderrahmane Mira University of Béjaïa, Algeria.

ISSN: 2716-814X

Journal Policies

Interpretation and Discourse Analysis Journal is committed to maintaining clear editorial policies that promote scholarly quality, editorial independence, fair peer review, research integrity, and responsible academic publishing.

The journal's policies are informed by the principles and guidance of the Committee on Publication Ethics (COPE) and internationally recognized principles of transparency and good publishing practice.

1. Publication Scope and Editorial Criteria

The journal publishes original scholarly research in language and literature, in accordance with its stated scope and areas of specialization.

Manuscripts are assessed according to their originality, academic significance, methodological soundness, accuracy of findings, quality of presentation, referencing, and contribution to knowledge in the relevant field.

2. Peer Review Policy

The journal adopts Double-Blind Peer Review, under which reviewers are not informed of authors' identities, and authors are not informed of reviewers' identities.

All submissions undergo an initial editorial screening. Eligible manuscripts are then evaluated by at least two independent reviewers. A third reviewer may be appointed when reports conflict substantially or further assessment is needed.

Editorial decisions are based on scholarly merit, originality, methodology, and relevance to the journal. Decisions must not be influenced by personal relationships, institutional affiliation, commercial considerations, or other irrelevant factors.

3. Editorial Independence

The editorial team is committed to independent, objective, and fair decision-making.

Editorial decisions must not be influenced by an author's institutional affiliation, nationality, personal beliefs, or relationships. Manuscripts submitted by members of the editorial team must be handled through procedures that safeguard impartiality, including assignment to an independent editor where appropriate.

4. Competing Interests

Authors must disclose financial, professional, personal, or academic interests that could reasonably be perceived as influencing their research or the interpretation of their findings.

Reviewers and editors must also disclose any competing interests that could compromise their impartiality. Where a conflict cannot be adequately managed, the individual concerned must withdraw from the assessment or decision-making process.

5. Authorship and Contributions

Authorship must accurately reflect substantial scholarly contributions to the research.

The journal does not accept honorary or guest authorship, ghost authorship, or the inappropriate omission of contributors who qualify for authorship. Authors must agree on the author list, order of authors, and corresponding author before submission.

Changes to authorship after submission may be considered only when justified, supported by the written agreement of all affected authors, and approved by the editorial team.

6. Duplicate and Simultaneous Submission

The journal does not accept manuscripts that are under consideration by another journal at the same time or that have already been published as original research.

Authors must disclose any previous publications or related manuscripts that substantially overlap with the submitted work. Any exceptional republication arrangement must be justified, transparent, and appropriately authorized.

7. Research Integrity

The journal does not tolerate research misconduct, including:

- Plagiarism and inappropriate reuse of published material.
- Fabrication or falsification of data.
- Manipulation of results or research records.
- Inappropriate attribution of authorship.

- Duplicate publication or misleading fragmentation of research.
- Citation manipulation.
- Failure to disclose relevant competing interests.

Concerns are handled according to the nature and seriousness of the case, with appropriate consideration of the available evidence and an opportunity for relevant parties to respond.

8. Use of Artificial Intelligence

Authors must disclose substantive use of generative artificial intelligence tools in writing, translation, analysis, or the production of research materials when such use is relevant to the scholarly work and its assessment.

AI tools cannot be listed as authors. Human authors remain responsible for the accuracy, originality, integrity, and ethical compliance of the submitted work, including the verification of references and data.

AI tools must not be used to fabricate data, findings, references, or other scholarly content, or to misrepresent the origin of material.

9. Complaints and Appeals

Authors may submit reasoned complaints or appeals concerning editorial procedures or publication decisions.

Complaints are assessed confidentially and objectively by an appropriate person who is not directly involved in the matter wherever possible. Appeals should identify clear scholarly or procedural grounds. Submitting an appeal does not guarantee that the original decision will be changed.

10. Corrections and Retractions

When a published article is found to contain an error affecting its accuracy or reliability, the journal will consider appropriate action in light of the available evidence.

Possible actions include publishing a correction, issuing an expression of concern, or retracting the article when justified. These measures aim to preserve the integrity and reliability of the scholarly record.

11. Open Access and Copyright

The journal is fully open access and completely free of charge. No submission fees or publication fees are charged at any stage of the editorial and publication process. Copyright remains with the authors, and all published articles are licensed under the [Creative Commons Attribution 4.0 International License (CC BY 4.0)]

<https://creativecommons.org/licenses/by/4.0/> , which permits sharing and adaptation of the published material, provided appropriate credit is given to the original authors and source.

12. Ethical Framework

The journal draws on the guidance of the Committee on Publication Ethics (COPE), particularly its recommendations concerning peer review, competing interests, research misconduct, corrections, and retractions.
