Publication Guidelines

To publish in the journal, authors must adhere to academic scientific analysis and methodological writing by following these guidelines:

The research paper should not exceed 30 pages and must not be less than 10 pages. It should include an abstract in both the research language and one other language, not exceeding 150 words. The title of the article should be written in both languages.

Submissions should be on A5 paper, with single spacing between lines, and margins of 1.5 cm on the right, left, top, and bottom. The text should follow the article template, with Arabic text in (Simplified Arabic) font size (12) and French/English text in (Times New Roman) font size.

The article must be original and not published in any other scientific body.

The article should be submitted in (Microsoft Word) format via the Algerian Journals Platform:

Algerian Journals Platform

References should be cited in (APA) style and listed at the end of the article in the following order:

Author, (Year). Title of the book. Edition, Country: Publisher.

Author, (Year). "Article." Title of the journal, conference, or website.

The journal retains all intellectual property rights for published research.

Articles published in this journal reflect only the opinions of their authors.

The editorial board has the right to make formal adjustments to the submitted material when necessary, without altering the content of the subject.

Articles that do not comply with the journal's publishing conditions will not be published, regardless of their scientific value.

Journal Introduction

The Studies and Research in Renewable Energy Economics journal is inherently multidisciplinary, encompassing a wide range of fields and perspectives. This approach is essential given the complex nature of renewable energy and its intersection with various disciplines. The journal invites contributions from diverse academic backgrounds, ensuring a holistic examination of renewable energy issues.

Key Disciplines Covered:

Economics:

Analyzing market dynamics, cost-benefit analyses, and economic models related to renewable energy investments and policies.

Exploring financial mechanisms and funding strategies for renewable energy projects in remote and underserved areas.

Environmental Science:

Investigating the environmental impacts of renewable energy technologies, including ecological assessments and sustainability studies.

Evaluating strategies for minimizing negative environmental consequences while maximizing renewable energy output.

Engineering:

Focusing on technological advancements in renewable energy systems, such as solar, wind, and bioenergy technologies.

Researching innovative engineering solutions that enhance the efficiency and effectiveness of renewable energy applications.

Social Sciences:

Examining the social implications of renewable energy adoption, including community engagement, public perception, and policy acceptance.

Studying the socio-economic effects of transitioning to renewable energy sources in different demographics.

Policy and Governance:

Analyzing regulatory frameworks, policies, and governance structures that facilitate or hinder renewable energy development.

Evaluating the role of government and international organizations in promoting sustainable energy practices.

Sustainability Studies:

Investigating sustainable development practices and their integration with renewable energy initiatives.

Exploring the relationship between renewable energy and broader sustainability goals, including climate action and social equity.

Collaborative Research Opportunities:

The journal encourages interdisciplinary collaboration, allowing researchers from different fields to contribute their unique insights and expertise. This collaborative approach fosters innovative solutions to the challenges associated with renewable energy and promotes comprehensive research that addresses the multifaceted nature of sustainability.

By embracing a multidisciplinary framework, the Studies and Research in Renewable Energy Economics journal aims to provide a platform for diverse perspectives and methodologies. This inclusivity enriches the academic discourse around renewable energy, ultimately contributing to more effective and sustainable energy solutions that benefit society as a whole.

We invite scholars, practitioners, and policymakers from all relevant disciplines to submit their research and join the conversation on advancing renewable energy and sustainable development

Editor in Chief

Prof. Dr. Khatar Tarek
