Opening Remarks by the Editor-in-Chief

Dear Esteemed Readers,

It is with great pleasure that we present to you the first issue of Volume 6 (Special Issue), April 2026 of the Journal of Science and Knowledge Horizons (JSKH). As a platform for cutting-edge research and interdisciplinary dialogue, this special issue reaffirms our commitment to fostering academic excellence and promoting the dissemination of knowledge across the humanities and social sciences.

As part of our dedication to open access, JSKH remains committed to providing unrestricted access to all its content. We firmly believe that knowledge should be accessible to all, and we are proud to uphold the principles of Diamond Open Access, enabling authors, readers, and researchers worldwide to engage with our publications without barriers.

We would like to sincerely thank our reviewers, editorial board members, and contributors for their invaluable support and dedication. Their expertise and insights play a crucial role in maintaining the quality and integrity of our journal.

We also continue our efforts to align with international indexing standards and enhance the visibility and impact of our publication.

As you explore this special issue, we invite you to reflect on the rich insights and innovative contributions presented within. We hope that this edition inspires new ideas and meaningful academic discussions.

Thank you for your continued support of the Journal of Science and Knowledge Horizons (JSKH). We look forward to your valuable contributions in future issues.

Editor-in-Chief
PROF HAFSI ABBAS

Opening speech by

This special issue reflects the growing scholarly interest in Artificial Intelligence as one of the most transformative developments reshaping contemporary knowledge across multiple disciplines. AI is no longer confined to a technical domain; rather, it has become a critical lens through which legal, ethical, administrative, linguistic, educational, and psychological questions are being re-examined.

The contributions in this issue adopt diverse interdisciplinary perspectives. They explore AI in relation to moral responsibility from an Islamic normative framework, the legal implications of rewriting history through digital technologies, and its role in enhancing transparency in public procurement. Other studies examine AI as an instrument of soft power, its impact on translation and creative language processing, and its implications for higher education, digital communication, and clinical psychological assessment.

This diversity of themes highlights the complexity of AI as both a technological tool and a socio-cultural phenomenon that raises profound epistemological and ethical questions. It also underscores the necessity of interdisciplinary dialogue to better understand its implications in emerging societies.

We hope that the articles included in this issue will stimulate further academic reflection and contribute to a more critical and

informed discussion on the future of Artificial Intelligence in our rapidly evolving world.
