Terms and conditions of publication:

The Journal of Economics and Rural Development JERD publishes scientific articles that are concerned with the fields of economics, commerce, accounting, marketing and management, and are published in Arabic, French and English, with the need to respect the following conditions:

- 1- The research submitted for publication in this journal must not have been published or submitted for publication in other journals or periodicals, or submitted and published in forums, conferences or symposia.
- 2- Commitment to scientific analysis and adherence to generally accepted scientific and methodological conditions.
- 3- Writing on the first page the title of the article in Arabic and English, the name, title, degree, institution of affiliation, and e-mail, and the abstract in two languages.
- 4- The research shall be accompanied by two abstracts; One of them is in the language of the research and the second is in English and obligatory within 100 words attached to the keywords.
- 5- Scientific sources are indicated in the body of the article in parentheses, and the references at the end of the article using the American Psychological Association's method of citing references (APA Style).
- 6- The article should be supported by original references, particularly for ideas, judgments, definitions, models, theories, results of previous studies, data sources, and figures.
- 7- Edit the article in Microsoft Word in Simplified Arabic font size 13, line spacing 1. Page size A4 (length 29.7 cm, width 21 cm) with margins framing in En miroir format by clicking on Mise en page and then Marges.
- 8- The article should not exceed 25 pages and not less than 12 pages, including figures, tables and references.
- 9- Pages are numbered in the middle at the bottom of the page.
- 10- The article should be free from punctuation, grammatical, and spelling errors.

All articles sent to the journal are subject to evaluation by the members of the scientific committee of the journal, and the researcher is notified electronically of the evaluation result through his account in the Algerian Scientific Journal Platform. The researcher must comply fully with what is stated in the author's guide and the author's instructions on the journal's account at (ASJP):.....

Pledges are sent via e-mail signed by researchers via mail. In addition to any inquiries,

Journaleconomics14000@gmail.com

11- Articles are sent exclusively through the journal account on ASJP

The opening :

Within this issue, 07 articles were accepted as follow:

The first article entitled: **Sustainable health development in Algeria and social well-being Opportunities to Move Forward 2030; Read in the Global Emergency Response Experience - COVID-19 Model** –The article discusses Algeria's health policy and the changes it has undergone due to political decisions, economic challenges, and biological crises. It focuses on the importance of sustainable health development by examining its general concepts, key indicators, and ways to enhance them. The study concludes that health is a fundamental pillar of inclusive and sustainable development. A lack of control over health services and policies negatively impacts individuals, society, and the environment. Furthermore, it highlights the strong interconnection between health and sustainable development, as health serves as a link between its three main pillars: environmental, social, and economic.

As for the second article which entitled: **Sustainable agricultural development and agricultural production in the Algerian Sahara: ways to respond to the challenges of food security, water and energy security, and climate change;** The study examines the role of sustainable agricultural development in the Algerian Sahara in achieving food security. It highlights the main challenges facing agriculture in this region, including climate change, low rainfall, concerns over shale gas exploitation in southern Algeria, and weak water resource management. To address these challenges, the study emphasizes the need for sustainable agricultural development through aquaculture, renewable energy (such as solar energy), the adoption of modern agricultural technologies, and improved water security. This can be achieved by enhancing water resource management and increasing investment in desalination projects to provide fresh water for agriculture in southern Algeria.

While the third article which entitled : "**The Mechanizm of digital transformation in higher education: University of M'sila case study;** The study examines the digital transformation of higher education in Algeria, which accelerated due to COVID-19 despite insufficient planning. It aimed to develop a strategic model for M'sila University, revealing significant progress despite initial delays. Achievements include improved university rankings, increased lessons on Moodle and MOOC platforms, and a higher number of student users. The national platform for student registration and human resource management has also been effectively utilized. Additionally, M'sila University's visibility on ResearchGate and Google Scholar has increased, along with enhanced teacher training in digital platforms.

The fourth article : **Feminist entrepreneurship in rural areas: concept and perspectives;** This study examines feminist entrepreneurship, emphasizing its importance in the global economy and the unique challenges faced by women entrepreneurs. It explores the evolution of female entrepreneurship, highlighting social, cultural, and economic influences. Key barriers include limited access to funding, societal norms, and work-life balance difficulties. The study underscores the role of support networks, mentorship, and education in empowering women. It also discusses

female entrepreneurs' contributions to economic development and calls for a more inclusive business environment. Lastly, it advocates for stronger recognition and collaborative efforts to support women's entrepreneurial aspirations, promoting economic and social progress.

Concerning the fifth article entitled: **Rural entrepreneurship in Germany**; This study examines rural entrepreneurship in Germany, highlighting its unique challenges and opportunities. It explores factors influencing success and sustainability through literature reviews, government reports, and case studies. Findings indicate that while rural entrepreneurs are resourceful and community-oriented, they struggle with funding access, infrastructure limitations, and demographic shifts. However, government support programs and digitalization offer promising solutions. The study recommends investing in rural infrastructure, expanding financial support, and providing specialized training. Additionally, fostering rural-urban connections, promoting digital literacy, and encouraging innovation in sustainable agriculture and ecotourism are key to unlocking rural entrepreneurship's full potential.

As for the sixth article, which was entitled: **Health Policy and Its Impact on Sustainable Development in Algeria**; The study of the relationship between health policy and sustainable development in Algeria showed significant progress in certain areas, such as improving access to healthcare and improvements in health indicators. However, it still faces major challenges in areas such as financing, infrastructure, and bridging the gap between the public and private sectors. To achieve sustainable health development, Algeria must strengthen preventive health policies, improve the financing of the healthcare system, and enhance collaboration between various stakeholders, including the government, private sector, and civil society.

While the seventh article, which was entitled: **Renewable Energies as a Sustainable Investment: Their Impact on the Local and National Economy**; This study explores the strategic role of renewable energies in achieving sustainable development by enhancing economic stability and reducing reliance on conventional energy sources. It highlights key benefits, including job creation, industrial growth, and lower production costs, which strengthen both local and national economies. The study also examines how renewable energy supports rural development by providing sustainable power and attracting investments. Despite challenges like high initial costs and limited supportive policies, expanding this sector presents opportunities for energy independence and technological innovation. The study recommends implementing incentive-based policies to maximize the potential of renewable energy for a more sustainable economy.
